                                                                                 1;
                                                                                                                      products. These proteins may be used to treat a patient diagnosed as having human hemochromatosis disease. It is also useful as a metal chelation agent or as a T-cell differentiation factor, and for alleviating iron overload. They may also be used in protein replacement therapy for individuals having a defective human hemochromatosis gene.
                                                                                                                                                                                                                                                                                                                                                                                                                                                    4001

```

This genomic DNA sequence corresponds to the human gene whose mutated form is associated with hereditary haemochromatosis (HH).

To identify this novel gene, allelic association patterns were determined between known markers and the HH locus in the HLA region of chromosome (A physical clone coverage was then generated extending from D65265, which is a marker that is centromeric of that.

CC (HLA-A, in a telemeric direction through D65276, a marker at which can be appears responsible for the majority of HH disease. This comprises a G to A substitution that is present in the HH gene appears responsible for the majority of HH disease. This comprises and in 4% of unaffected chromosomes.

CC (24d1) in the HH gene appears responsible for the majority of HH disease. This comprises and in 4% of unaffected chromosomes.

CC (24d2) in the HH gene appears responsible for the majority of HH disease. This comprises and in 4% of unaffected chromosomes.

CC (24d3) in the HH gene product is secondary attructure. The following are claimed: the HH genomic DNA (1), a structure. The following are claimed: the HH genomic DNA (1), a containts, a cloning or expression vector; host cells; a peptide product chosen from the HH gene product, its variants (24d7 variants, a cloning or expression vector; host cells; a contained by produced using the peptide; a method for case of these; an antibody produced using the peptide; a method containing the peptide; a method containing the peptide; a method for case of the common HH gene mutation; an annimal model for there were appeared of injury due to oxidative process in vivo or mitigation of injury due to oxidative process in vivo or the mitigation of injury due to oxidative process in vivo or the mitigation of injury due to oxidative process in vivo or the mitigation of injury due to oxidative process in vivo or the mitigation of injury due to oxidative process in vivo or the mitigation of injury due to oxidative process in vivo or the product of a nucleic acid sequence due procession product o Sequence 10825 BP; 2996 A; 2254 C; 2648 G; 2927 T; 0 other; Indels Score 319.4; DB 1 Pred. The present sequence represents the human histocompatibility iron loading (HFE) gene. The HFE gene is a major histocompatibility (MHC) non-classical class I gene located on chromosome op. Mutations in the gene lead to iron disorders. The specification describes a method for diagnosing an iron disorder or a genetic susceptibility to develop the disorder in a mammal. The method comprises determining the presence of a mutation in exon 2 or an intron of a HFE gene or protein. The mutation is not a C to G missense mutation at nucleotide 187 of the sequence given in A96769 (Genbank Accession number U60319). The presence of the mutation indicates the disorder or the genetic susceptibility to the
                                                                                                                                                                                                                                                                                                       Diagnosing an iron disorder e.g. hemochromatosis or a genetic susceptibility to develop it, by determining the presence of a mutation in exon 2 or an intron of a histocompatibility iron loading nucleic acid -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       5011

The present invention describes hereditary haemochromatosis gene
products from the human haemochromatosis gene. The present sequence
represents a hereditary haemochromatosis subregion from an hereditary
haemochromatosis (HH) affected individual. Also described is a
method to determine the presence or absence of the common hereditary
haemochromatosis (HFE) gene mutation in an individual comprising:
(a) providing DNA or RNA from the individual; and (b) assessing the
DNA or RNA for the presence or absence of a haplotype or genotype where
the presence of the HFE gene mutation in the genome of the likely
presence of the HFE gene mutation in the genome of the individual. The
C HFE gene sequences from the present invention can be used to develop
products for use in the diagnosis and treatment of HFE. The present
Invention also describes BFF genes, which are homologues of the milk
protein butyrophilin (BT), and can be used in the production of agonists
                                                                                                                       Bovine butyrophilin; BT; human hereditary haemochromatosis; HFE; diagnosis; iron metabolism; NPT3; NPT4; RORet; BTF1; BTF2; BTF3; BTF4; BTF5; milk protein; lupus; Sjogren's syndrome; hypophosphatemia; type 1 sodium transport gene; ss.

and antagonists of BT function. Also described are: (1) a RoRet gene which can be used to develop products for the study, diagnosis and treatment of lupus and Sjogren's syndrome; and (2) NPT3 and NPT4 genes which are homologues of a type 1 sodium transport gene, and can similarly be used for hypophosphatemia.
                                                                                                                                                                                                                                                                                                                                                                                                                   43039

NOTE: This is a 'working draft' sequence. It currently consists of 18 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  120277 120376: gap of 100 bp 1120377 120376: gap of 12037 120376: gap of 12038 12037 120376: gap of 16284 bp in length 136661 1359013: contig of 17153 bp in length 153914 154013: gap of 100 bp 154013: gap of 100 bp 158660 158759: gap of 100 bp 158660 158759: gap of 100 bp 158760 164235: contig of 6466 bp in length 164236 164335: contig of 20661 bp in length 164336 184996: contig of 20661 bp in length 184997 185095: gap of 100 bp 100 bp 185095: gap of 100 bp 186097 185095: contig of 20661 bp in length.
